Project Reflection

In this project, my greatest skill was being able to interpret ideas and translate them into code. My ability to communicate, host meetings, and delegate also aided in the project. I am proud of our team's ability to dedicate ourselves and our time to a task. I am personally proud of the migrate function, it was a large hurdle to our success that I was able to solve. If I were to do it all again, I would have all team members try to conceptualize and map out a version of their own before the first team meeting. This would have helped us be on the same page while also bringing more unique ideas to the table. I would also try to take less control over the coding element. It would be helpful to make checkpoints for the project to avoid relaxing toward the beginning and rushing toward the end. I am grateful for all the skills and experience I have gained with working with my team and completing this project. If I were in a zombie apocalypse, I would want to be in the least populous district with the most health services. Not too secluded, but also not too dense.
